Overview of Today's Presentation

- What *is* a Learning Network?
- Do Learning Networks *work*?
- How did we start?
- How do we work?
- What did we learn?

What is a Learning Network?

Community of patients, families, clinicians, and scientists across multiple sites who use data for clinical care, improvement, discovery (research), and innovation

Why networks?

1. Reliable improvement in population outcomes at scale
2. Culture of collaboration that engages all stakeholders
3. Useful laboratories
4. Provide a robust infrastructure to produce new knowledge and innovative care models

“The Heart of the Matter”

*National Pediatric Cardiology Quality Improvement Collaborative
and Sisters by Heart*

Overview of Presentation

- What *is* a Learning Network?
- **Do Learning Networks *work*?**
- How did we start?
- How do we work?
- What did we learn?

IMPROVE**CARE**NOW

*Learning Network for children and adolescents with Inflammatory Bowel Disease
Began with 6 clinical sites in 2007*

Clinical remission rate in CD and UC

PGA = Inactive (Physician Global Assessment)

Rates of remission improved from 55% to 81% over 10 years, without a new treatment

REPLICATION OF THE MODEL

National Pediatric Cardiology Quality Improvement Collaborative
Infants with hypoplastic left heart syndrome (“half-a-heart”)

Two initial aims: 1)improve growth of infants and 2) reduce mortality

Reducing variation in growth

Identified growth bundle
In 6 months

Improvement in Mortality

46% reduction in inter-stage mortality

Anderson et al. *Circ Qual and Outcomes*. 2015;8:428-436

“I’ve learned more about the needs of patients and parents during the few years of the collaborative than in my previous 18 years of clinical practice.”

Martha Clabby, MD, Pediatric cardiologist
Childrens Hospital of Atlanta

**“Learn from one another
and get better faster...”**

Sarah Vinje, Mom to Cecilia

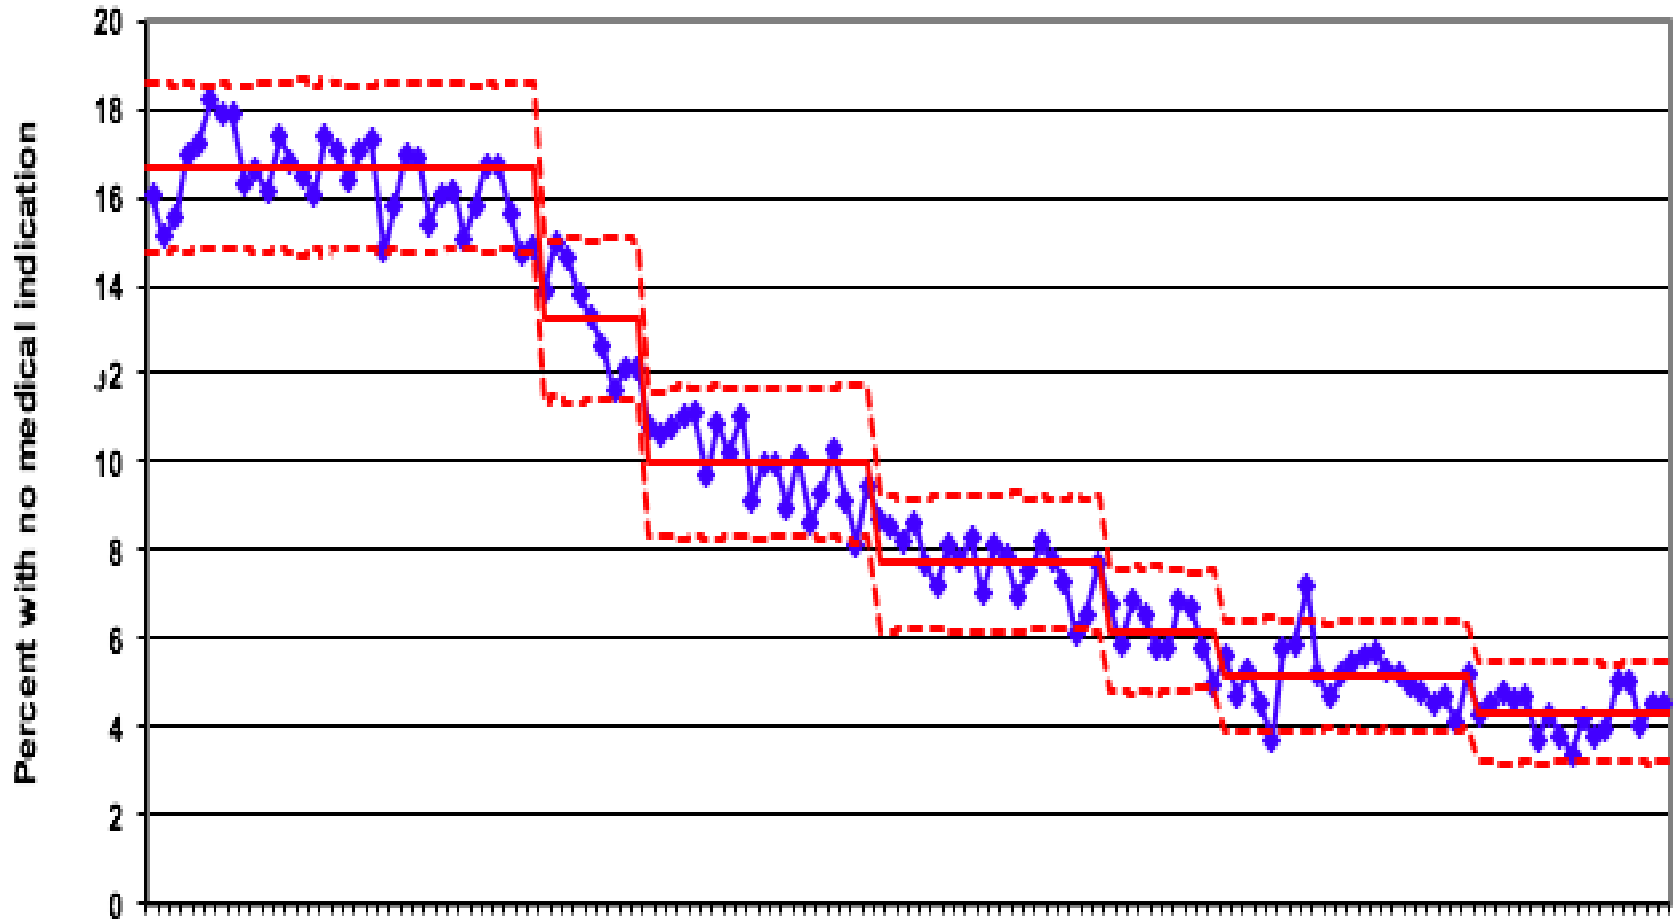

Ohio Perinatal Quality Collaborative

108 maternity hospitals in Ohio

*75% decrease in early elective deliveries
since 2008, >67,000 births shifted to term*

Solutions for Patient Safety

MISSION:

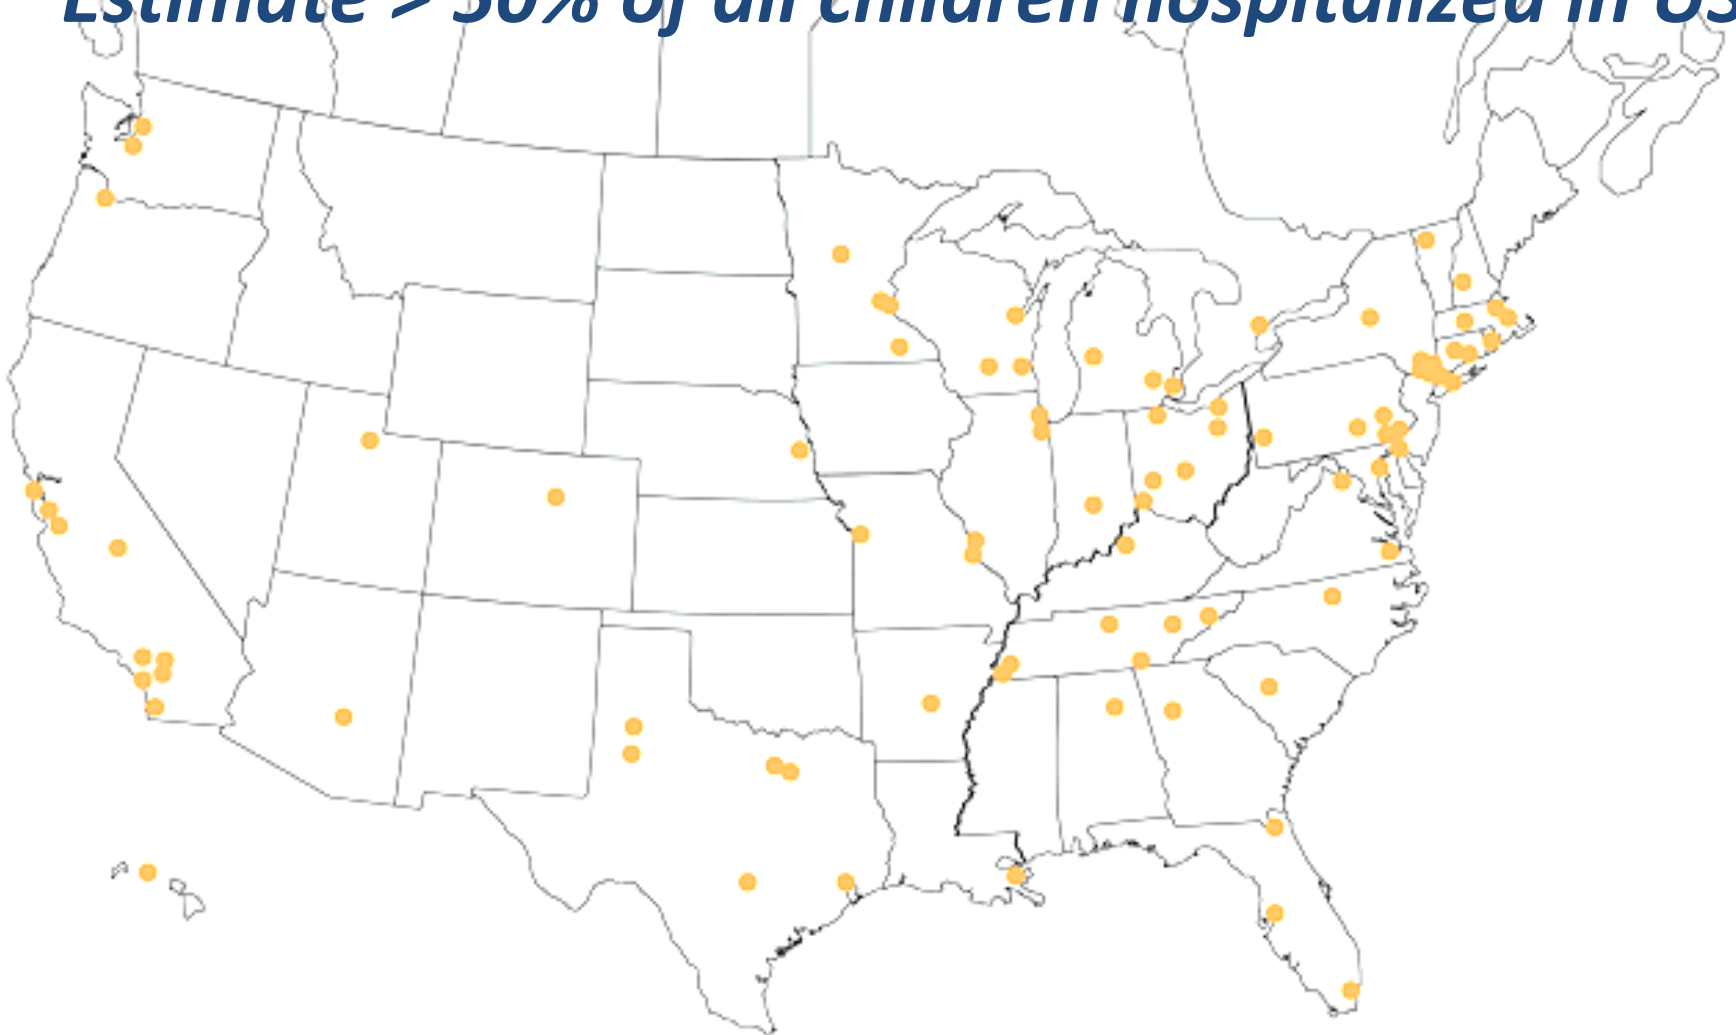

Working together
to eliminate serious harm across all
children's hospitals

VISION:

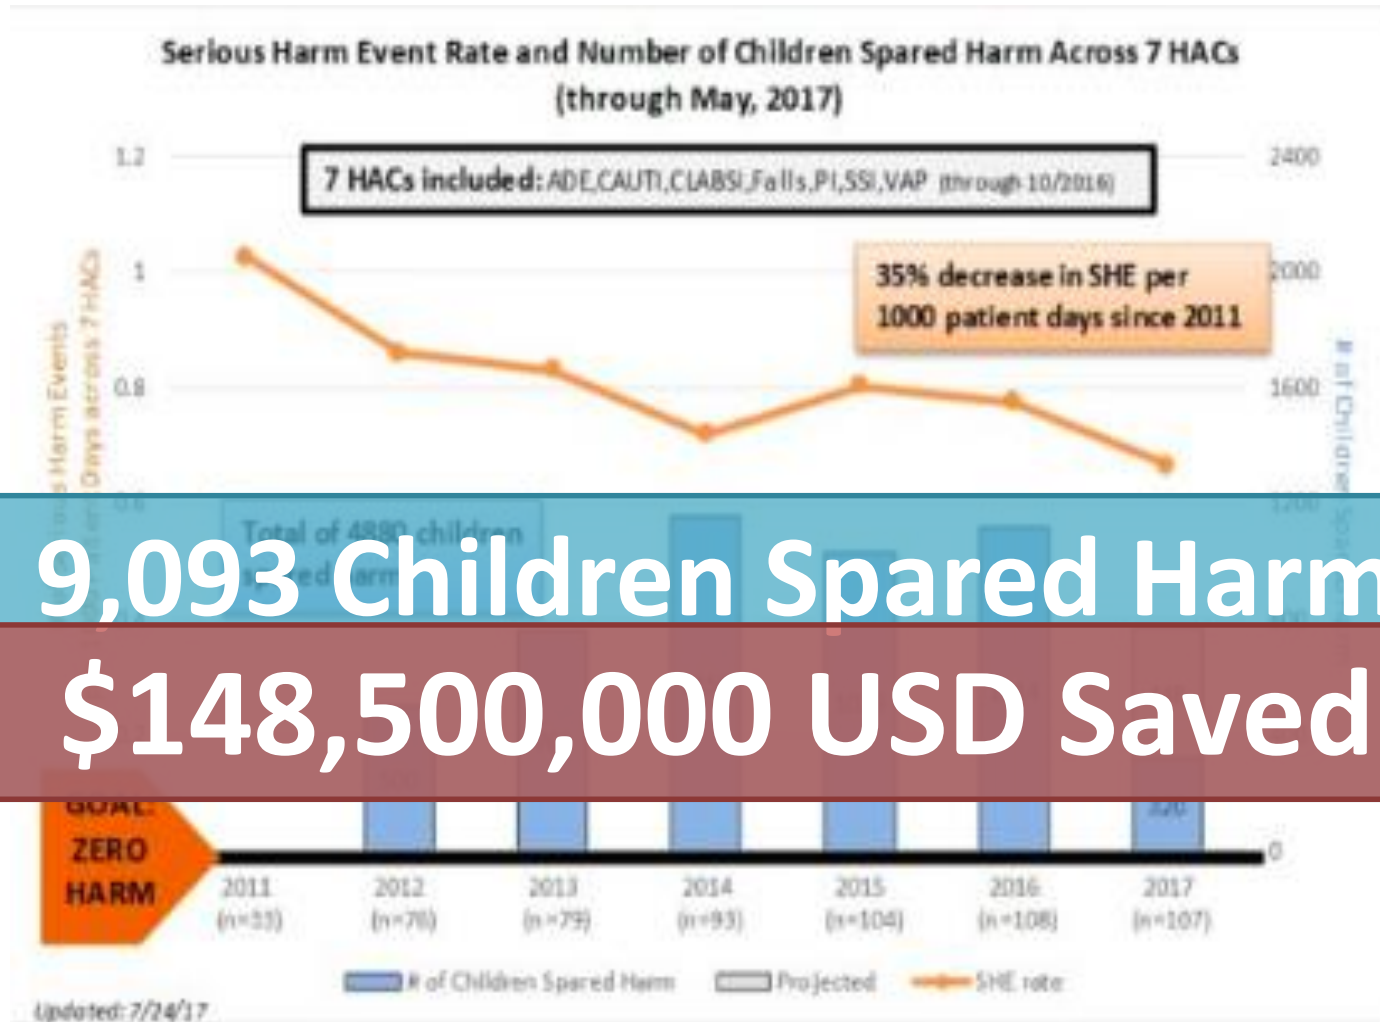

All Kids, All Hospitals, All Safe

Solutions for Patient Safety

- 100+ Children's Hospitals
- *Estimate > 50% of all children hospitalized in US*

Addressing hospital-acquired conditions (HACs)

Proof of concept of model

- Chronic diseases
 - “common” (inflammatory bowel disease)
 - rare (half-a-heart)
- Perinatal @ population level
- Hospital-based Safety

Growth of Learning Networks

558 teams at 286 sites

43 states and 5 countries (the US, UK, Canada, Belgium and Qatar)

8 networks

Overview of Presentation

- What *is* a Learning Network?
- Do Learning Networks *work*?
- **How did we start?**
- How do we work?
- What did we learn?

We began with a focus on improvement and translating research into practice.

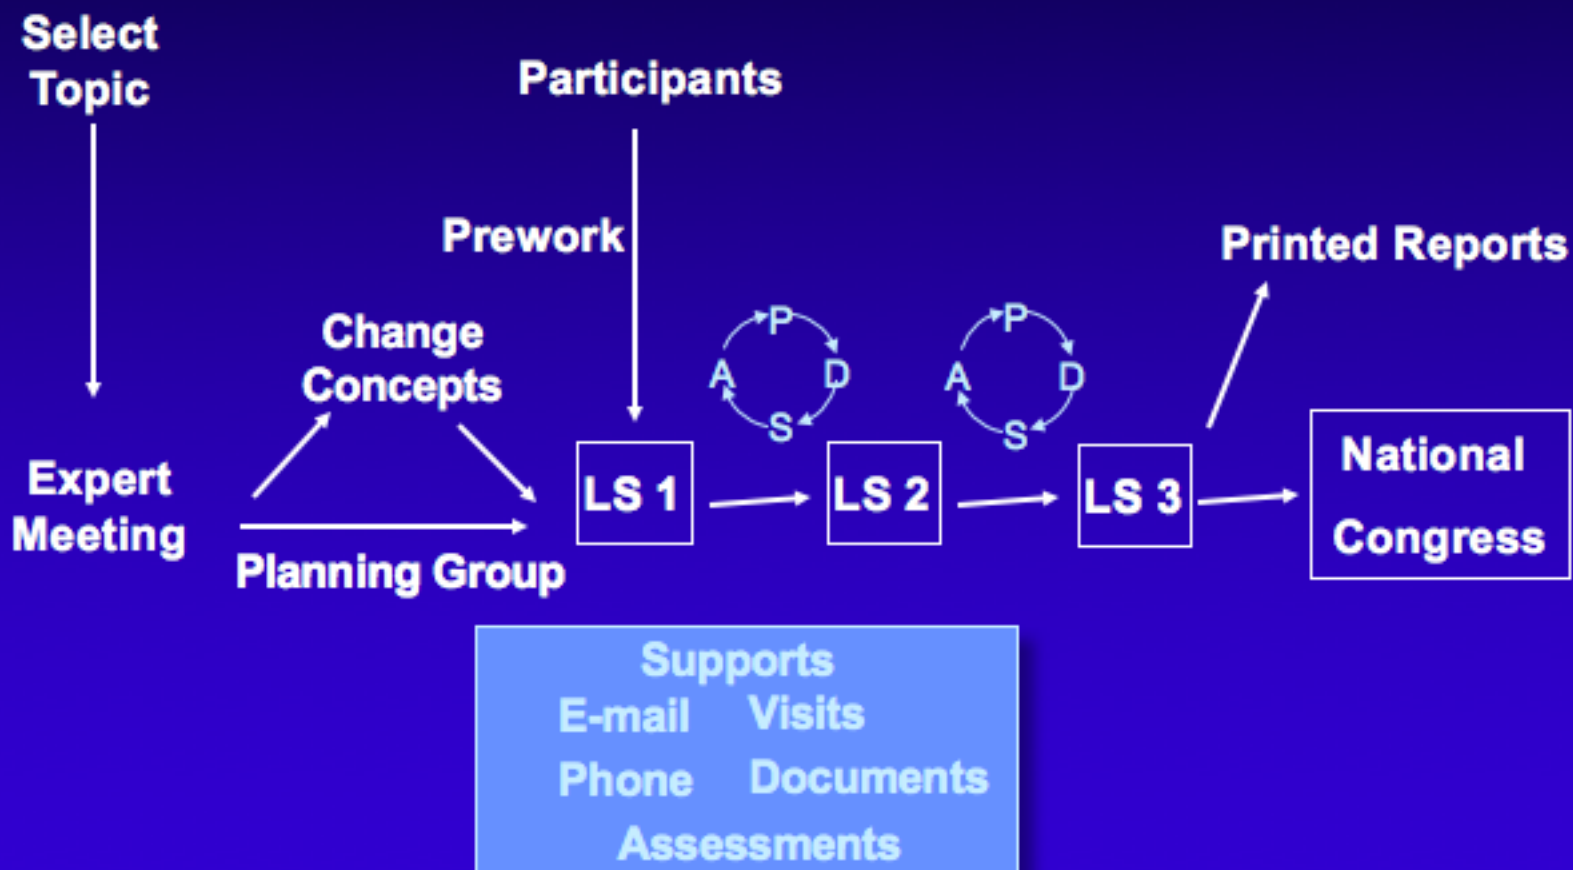

2003:
American Board of Pediatrics:
Development & Promotion of Collaborative Network Model

Initial focus

- Data
- QI methods
 - Shared goals
 - Regular performance feedback (e.g. monthly)
 - Testing changes to standardize care
- Methods to facilitate collaboration and sharing of knowledge : “All teach, all learn”
 - (face-to-face team meetings, monthly webinars, listserv, visits)

The Breakthrough Series

Danish culture already aligned with the community building and improvement aspects of the Learning Network model

Danish National Quality Program goals

NATIONALE MÅL : BEDRE KVALITET, SAMMENHÆNG OG GEOGRAFISK LIGHED I SUNDHEDSVÆSENET

INDIKATORER

Learning and Quality Teams established

1) Specialised palliative treatment (in cooperation with clinical register for palliative treatment)

2) Stroke (in cooperation with clinical register for Stroke)

3) Rational antibiotic therapy in hospitals (reducing use of antibiotics)

Duration: 6-8 month of preparation. 2 years collaborative work.

Danske Regioner

Denmark laying foundation for quality and collaborative learning networks

The next Learning and Quality Teams

The first LQTs focused on quality issues within hospital setting. Next LQT in collaboration with primary care for better cross sector care and cohesion:

- 1) +65 years old patients with hip fracture (pre and post operative, rehabilitation)
- 2) ADHD (visitation, diagnoses, medication, primary care services)
- 3) Perioperative treatment of acute high risk abdominal surgery
- 4) Type 1 diabetes in children and youth

All in cooperation with relevant clinical registries.

Researcher

Mom

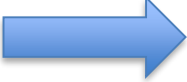

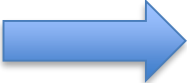

“My belly hurts”

Clinicians

To improve care and outcomes, we need to connect patients & families, clinicians and researchers

The Network Journey

- Clinician-focused  All participants
- Time-bounded  Enduring Networks
- QI  QI + Research

- Now, Learning Networks are doing research that makes a difference
 - Linking biomarkers to patient remission
 - Shared decision-making
 - Identifying effective clinical bundles
 - Comparative effectiveness studies
 - Pragmatic trials of biologics, pharmaceuticals
 - Patient reported outcomes
 - Social network analyses
 - Dissemination and implementation studies

Diffusion of results within the
network

Pediatric cardiology network

Sustained improvement in mortality

Reduction in interstage mortality by >40% and now stable at ~5%

Anderson et al. *Circ Qual and Outcomes*. 2015;8:428-436

*We had worked very hard to standardize care processes.
We asked: Any other reasons why mortality decreased?*

Study from our Network: Digoxin Use Associated with Decreased Mortality

ORIGINAL RESEARCH

Digoxin Use Is Associated With Reduced Interstage Mortality in Patients With No History of Arrhythmia After Stage I Palliation for Single Ventricle Heart Disease

David W. Brown, MD; Colleen Mangeot, MS; Jeffrey B. Anderson, MD; Laura E. Peterson, BSN, SM; Eileen C. King, PhD; Stacey L. Lihn, BA; Steven R. Neish, MD; Craig Fleishman, MD; Christina Phelps, MD; Samuel Hanke, MD; Robert H. Beekman III, MD; Carole M. Lannon, MD, MPH; on behalf of the National Pediatric Cardiology Quality Improvement Collaborative

Background—Interstage mortality (IM) remains significant after stage 1 palliation (S1P) for single-ventricle heart disease (SVD), with many deaths sudden and unexpected. We sought to determine whether digoxin use post-S1P is associated with reduced IM, utilizing the multicenter database of the National Pediatric Cardiology Quality Improvement Collaborative (NPCQIC).

Methods and Results—From June 2008 to July 2013, 816 infants discharged after S1P from 50 surgical sites completed the interstage to stage II palliation, transplant, or IM. Arrhythmia during S1P hospitalization or discharge on antiarrhythmic medications were exclusions ($n=270$); 2 patients were lost to follow-up. Two analyses were performed: (1) propensity-score adjusted logistic regression with IM as outcome and (2) retrospective cohort analysis for patients discharged on digoxin versus not, matched for surgical site and other established IM risk factors. Of 544 study patients, 119 (21.9%) were discharged on digoxin. Logistic regression analysis with propensity score, site-size group, and digoxin use as predictor variables showed an increased risk of IM in those not discharged on digoxin (odds ratio, 8.6; lower confidence limit, 1.9; upper confidence limit, 38.3; $P<0.01$). The retrospective cohort analysis for 60 patients on digoxin (matched for site of care, type of S1P, post-S1P ECMO use, genetic syndrome, discharge feeding route, ventricular function, tricuspid regurgitation, and aortic arch gradient) showed 0% IM in the digoxin at discharge group and an estimated IM difference between the 2 groups of 9% ($P=0.04$).

Conclusions—Among SVD infants in the NPCQIC database discharged post-S1P with no history of arrhythmia, use of digoxin at discharge was associated with reduced IM. (*J Am Heart Assoc.* 2016;5:e002376 doi: 10.1161/JAHA.115.002376)

Spread of the Use of Digoxin in the Network

Publication of results

*Discussion of results
at network meeting*

Ohio Perinatal Quality Collaborative

through the collaborative use of improvement science,
to reduce preterm births and improve maternal and
birth outcomes across Ohio as quickly as possible

Neonatal Abstinence Syndrome (NAS) Project

Orchestrated Testing at 52 Neonatal Units

Question: Is there a certain formula that is best for non-breastfeeding infants with NAS?

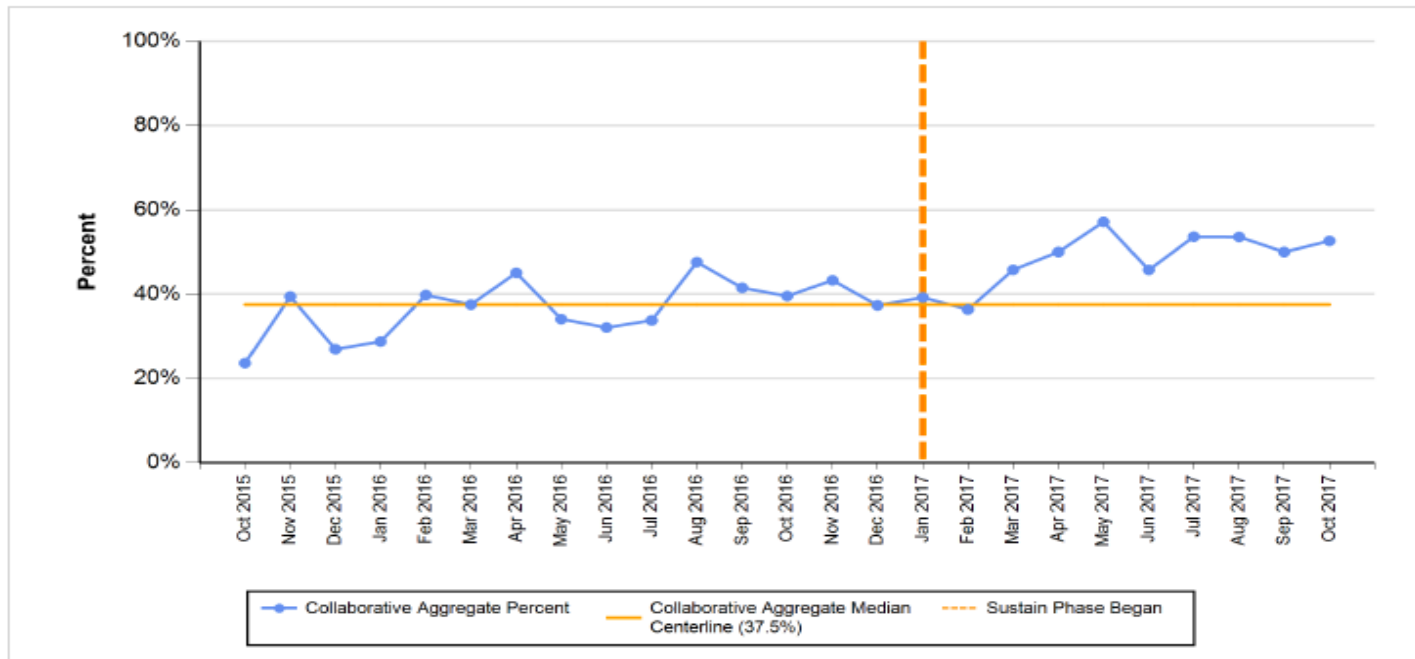

22-calorie formula is better

Diffusion of 22-calorie formula through the neonatal network

OPQC NAS Project Collaborative Aggregate

Percent of Infants Receiving 22 Kcal Formula Most Frequently

Example of a natural experiment within a network

Overview of Presentation

- What *is* a Learning Network?
- Do Learning Networks *work*?
- How did we start?
- **How do we work?**
- What did we learn?

Design Principles

1. Focus on outcome
2. Build community
3. Use technology effectively
4. Develop and continuously improve the system

Networks

WIKIPEDIA
The Free Encyclopedia

What if....?

- ...we could create a vastly better chronic care system by harnessing inherent motivation and collective intelligence of **patients** and clinicians?
- ... this system allowed **patients** and physicians to share information, collaborate to solve problems, use their collective creativity and expertise to act in ways that improve health?

IMPROVE**CARE**NOW

Clinical remission rate in CD and UC

PGA = Inactive (Physician Global Assessment)

Creating a culture of generosity and contribution (with all stakeholders)

Overview of Presentation

- What *is* a Learning Network?
- Do Learning Networks *work*?
- How did we start?
- How do we work?
- **What did we learn?**

Learning Network Components

- Systems of Leadership
 - Including leadership team: Faculty/Content Lead, Improvement/Collaborative Science Lead, Patient/Family(s))
- Network Coordinating Center
 - Governance & Management
- Quality Improvement support & capability
- Research/science support
- Data & Analytics / Data Coordinating Center
 - Data collection/management/registry, and analytics
- Community
 - Improvement Teams at network sites / centers, including patients and families

What we've learned

- Go faster and further when we partner with patients and families
- Building participation by everyone develops more capacity
- Relentless focus on outcomes drives progress
- Structures and processes make it easier to collaborate

What we are still learning

- Becoming more efficient and developing a shared infrastructure
- The better we get, the problems may become more complex
- Balancing priorities: improvement, research, innovation

In a networked world, value comes from who you are connected to, how you are connected, and the ability to share and contribute

Taking advantage of a network requires new ways to lead and practice to facilitate sharing, generosity, trust, connectivity and cooperation.
