

Nationwide Telemedical Programme

Background, Evidence & Evaluation

Webinar Thursday 26 November 2020
15:00 – 16:30 CET

A nationwide programme for telemedical support of large patient groups is currently being rolled out in Denmark. Following a stepwise course, the first wave includes patients suffering from severe COPD, the next wave patients suffering from cardiovascular diseases, followed by additional large patient groups. The programme ensures full interoperability across platforms and sectors: hospitals, GPs and primary healthcare services.

The webinar will outline the programme plan and status, the supporting national data infrastructure, evaluation plans, and the background behind the programme and national / international evidence of various types of telemedical intervention outcomes.

Programme

Welcome. Prof. Søren Paaske Johnsen. DSKS Research Committee and Aalborg University,

Plans and status of the comprehensive national telemedical rollout. Peter Munck Jensen. Section Head, The Danish Health Data Authority.

Overview of the national data and services infrastructure. Christian Callsen. OptimumIT.

Evaluation of telemedical outcomes - clinical, patient-experienced, economic. Prof. Lars Ehlers. Head of Danish Center for Healthcare Improvements, Aalborg University.

Evidence behind telemedicine – national and international. Prof. Kristian Kidholm. Head of Research, Center for Innovative Medical Technology, Southern Danish University.

A PhD project on evaluation of the COPD programme. Sabine Michelsen Raunsbak. Danish Center for Healthcare Improvements, Aalborg University.

Discussion & conclusions. Prof. Henning Boje Andersen. DSKS Research Committee and Technical University of Denmark.
