The future of health services research: Workshop and kick off of a national network

Our current health care systems are not healthy nor sustainable, as they are not providing health for all in a manner that cares for those most in need, protects its workers, and minimises risks of harm to patients and financial waste. The need for timely health services research to aid decision makers towards more person-centered, safer and efficient health care systems is strong. To meet this demand, we need strong academic institutions and clear multidisciplinary career pathways for talented researchers.

What? The Research Committee of the Danish Society for Quality in Health Care organises an interactive workshop on the future of health care services. The event is also the kick-off event of a new national network for early-stage researchers within health services research. Come and meet and discuss with leading senior experts and network with colleagues.

When? 28th November 2022, 9.30-16.00

Where? Comwell Hvide Hus Aalborg

Who? The event and network is primarily aimed at early stage researchers (e.g., master and PhD students, post.docs), but everyone with an interest in health services research is welcome, irrespective of seniority and academic background.

The practical stuff:

Price: Dkr 500,-. Includes a full days program with breakfast, lunch, coffee and snacks. Refund is not possible after sign-up, but the fee can be transferred to another participant. Deadline for registration: 20th November.

Please sign up at:
